Stormviper V2.5 Installation Steps

Follow the *Exact* Steps if you want a successful installation in Android 12 without Issues !

What You Need To Prepare?

Storm V3 Revolution Zip – Download from our GitHub Repository
Stormviper V2.5 – Download from our GitHub Repository
Magisk V23 zip (don't use other version only use V23.Zip !!!! or you may face Issues or Boot loop)
Android 12 Custom Rom (We Recommend Arrow OS / Xtended MSM / MiuiMix)

Note: For this Installation we always Start from a Clearing install of Your Custom Rom in Recovery. Do a proper Wipe and Wipe Cache, System, Data. Next load and Flash your Rom. If ROM doesn't come with Gapps then Flash eg. Flame Gapps Basic. Only then Flash Magisk V23.Zip. Ensure there is no issues or Error. Then Boot to System.

Observation on First Boot: Check Magisk its greyed Out when you try to open it says it needs to be Upgraded. So get connected to Internet and Update Magisk, Download and Install. To finish reboot!

Observation on 2nd Boot: Check Magisk ensure its running. It will install to latest Magisk. This is the proper way so you wont get a Boot loop during flashing Rom and Magisk from Recovery so ensure you follow the steps EXACTLY as we mentioned.

Next Task: Flash Storm V3 Revolution Zip!. It will ask to Reboot. Do That!

Observation after Reboot: Once you are on system you might encounter java Error during Boot (don't panic) and you will get a prompt to Grant Root to Storm V3 Revolution!. Just Click Grant the access!. Once you do this DONOT attempt to open Storm Revolution because it wont open! Or it might Crash!..So dont do that! . Instead Install the Stomviper v2.5 apk. After install Reboot !

Once Reboot : go to Magisk and Check Modules. You should See WTS v2.2 Module (this is the Developer name that help Storm to create our Magisk Module Installer) We did not changed the name of the module to Storm to give the credit that the Developer deserves! So if you see that Module means Storm Revolution is install. So now open up StormViper v2.5 Apk !. Don't be shocked on your desktop you have two viper apk. One is Storm Revolution and One is Stormviper V2.5 (blue Icon) Start V2.5 and go to setting and Check Driver Status!. Test Audio Processing..play some music, check you tube.. etc you may also Load Storm Presets that is bundles with v2.5 .

Next: You can now Disable Storm Revolution apk. You can do this via double click and choose Disable in App info our in App or Program Settings. Its better to disable Storm Revolution and Let only Stormviper v2.5 run as main Viper. Yes the V2.5 are aging but trust me its more stable then V2.7.2.1 has tweaks that provide consistent connection to viper and has no Legacy issues! So that's it all done!

Storm Presets and IRS!

Stormviper V2.5 originally release in 2019 it was one of our earliest mod that bundles Our Custom Preset and IRS. This is now also embed and bundle in Stormviper v2.5. You may use these presets for your personal listening but you may not repackage copy or distribute our presets or IRS convolver. All Storm IRS are licensed work. Sharing our work is illegal and unlawful by Law. The use of all our software are covered under our Private Licensing and also MIT License and may only be use for personal testing only not for any type of distribution Online or Offline

Last Words?

I could easily upload a complete Auto Install Zip for all. But I reserved those Solution for our Premium and Loyal Members Only. That Solution is now known as Storm Renaissance V1. It has been out almost six months. All our works is always way ahead of any reach from telegram users. This is to avoid illegal Sharing, Copying, and Other Abuses.

For the Android 12 and Beyond. The Aging Viper Driver has been plan to be Updated. Storm now has a lossless 24bit 48-96KHz Driver and has been on Beta for past 3 months. In the past we have been in Telegram but some senior Developers are not welcoming to our group so we left. So dont complain to us. Complain to them who you have abandoned you guys! And Release such awful release eg. V2.7.2.1 !
